

Consolidated Edison Company  
of New York, Inc.

P.S.C. No. 2 - Retail Access  
Third Revised Leaf No. 138  
Superseding Second Revised Leaf No. 138

**SERVICE CLASSIFICATION NO. 14-RA - Continued**  
**STANDBY SERVICE**

**Common Provisions - Continued**

**Metering and Determination of Demand**

- (A) A demand-measuring device is required if the Service Classification under which the Customer would otherwise receive service requires installation of demand metering. For service under this Service Classification, such meter may include equipment either to prevent reverse meter registration or to separately measure Customer-generated electricity and electricity delivered by the Company. Where the Company is required to install a demand-measuring device, such device will be of a type approved by the Public Service Commission for the determination of maximum demand. See General Rule III-11(D) of the Full Service Schedule for the definition of maximum demand.
- (B) A Customer who would be subject to demand billing under the Customer's otherwise applicable Service Classification is required to have interval metering, unless the Customer is served under Special Provision D of this Service Classification. When an interval meter measures demand, the maximum demand for each respective time period shall be the integrated demand occurring during the two highest contiguous fifteen-minute intervals during each applicable time period.
- (C) For Customers required to have interval metering, the initiation of service under this Service Classification requires the establishment of a Contract Demand for the account, expressed in kilowatts ("kW"). Contract Demand for the purpose of this Service Classification means the Customer's maximum potential demand. Where both high tension and low tension service are delivered to a Customer's account, separate Contract Demands will be established for the low tension service, for the high tension service below 138,000 volts, and for the high tension service at 138,000 volts. Unless the Customer provides the Company at the time of its application for service hereunder or its transfer to this Service Classification from Service Classification No. 3 or 10, an estimate of its Contract Demand as determined by a professional engineer retained by the Customer and as adjudged by the Company to be reasonable, the Company will establish the Customer's Contract Demand using the best available information. In any month that the maximum demand exceeds the Contract Demand, such higher maximum demand shall become the new Contract Demand for the account beginning with that month and the Customer will pay the surcharge set out in Provision D of this section.
- If a Customer served under this Service Classification is also served under Rider Q and/or the Economic Development Delivery Service ("EDDS") Rate Schedule, the Contract Demand for service under this Service Classification is the Customer's maximum potential demand in excess of the Customer's kW allocation under Rider Q and/or the EDDS Rate Schedule, as applicable.

(Service Classification No. 14-RA - Continued on Leaf No. 139)

Date of Issue: June 10, 2002

Date Effective: September 10, 2002

Fifth Revised Leaf No. 139  
Superseding Fourth Revised Leaf No. 139

**SERVICE CLASSIFICATION NO. 14-RA - Continued**  
**STANDBY SERVICE**

**Common Provisions - Continued**  
**Metering and Determination of Demand - Continued**

**(C) - Continued**

At any time, the Customer may request a prospective revision of the Contract Demand, to a higher or lower level, subject to approval by the Company, if the Customer submits a reasonable estimate of the Contract Demand as determined by a professional engineer retained by the Customer, or if the Customer demonstrates, in advance, permanent changes to the electrical load in its premises through changes in equipment. For a Customer whose Contract Demand has been reduced in the current month, subsequent Contract Demands will be determined in the same manner as for all other Customers. No retroactive adjustment will be made for a reduction in the Contract Demand level.

The Minimum Monthly Charge described in General Rule III-11 (U) of the Full Service Schedule and in Service Classification Nos. 4, 5, 8, 9, 12 and 13 is not applicable to a Customer who is subject to Contract Demand Charges hereunder.

- (D)** If the monthly maximum demand exceeds the Contract Demand, a surcharge will apply to the current monthly bill for the excess demand. To determine the surcharge, the monthly Transmission Contract Demand Charge, Transmission Contract Demand MAC, Distribution Contract Demand Charge, and the Distribution Contract Demand MAC will each be calculated for the excess demand, and the charges will be summed. If the monthly maximum demand exceeds the Contract Demand by ten percent or less, the surcharge will equal twelve times the sum of the charges. If the monthly maximum demand exceeds the Contract Demand by more than ten percent, the surcharge will equal twenty-four times the sum of the charges.
- (E)** Provided that interval information is not requested more frequently than once per month and a telephone line was not maintained at Customer expense by the current or a prior Customer, the Company will provide and maintain the telephone line or other remote communications equipment under the following conditions:
- (1)** if the Customer would otherwise be subject to Rate II of Service Classification No. 4, 5, 8, 9, or 12 or to Service Classification No. 13 of the Full Service Schedule, or the equivalent Service Classification under this Rate Schedule; or
  - (2)** the Customer was billed under Rate I or Rate II of Service Classification No. 3 or 10, or the equivalent Service Classification under this Rate Schedule, on and before September 10, 2002.

(Service Classification No. 14-RA - Continued on Leaf No. 140)

Date of Issue: June 10, 2002

Date Effective: September 10, 2002

Issued by: Joan S. Frellich, Executive Vice President and Chief Financial Officer, 4 Irving Place, NY, N.Y. 10003

Consolidated Edison Company

P.S.C. No. 2 - Retail Access  
Third Revised Leaf No. 140  
Superseding Second Revised Leaf No. 140

**SERVICE CLASSIFICATION NO. 14-RA - Continued**  
**STANDBY SERVICE**

**Common Provisions - Continued**  
**Metering and Determination of Demand - Continued**

**(E) - Continued**

Except as specified above, the Customer will, at its expense, provide access to and maintenance of a telephone line or other remote communications equipment required by the Company for a Company- or Customer-owned meter that has remote communications capabilities. If communications is by telephone line, the Company will require the Customer to provide and maintain a dedicated phone line if the Company is unable to communicate with the meter using the existing telephone line. As explained in this Rate Schedule, in the section entitled, "Meters with Telecommunications Capabilities," the Customer will be assessed a charge if the Customer's phone line is not operational when the Company attempts to read the meter and a charge for an on-site reading on the scheduled reading date.

- (F) As-used Daily Demand Charges** are applicable to Customers required to have interval metering, unless the Customer is served under Special Provision D of this Service Classification. Where meter data is not available, the As-used Demand will be based on the best available data. For a Customer who is a wholesale generator, As-used Demand Charges will not apply for any day during which it self-supplies all of its energy needs from the load side of the meter.

If a Customer served under this Service Classification is also served under Rider Q, a Power for Jobs ("PFJ") ratio will be calculated. The PFJ ratio will be the Customer's kW allocation under Rider Q to the sum of the Rider Q kW allocation and the Contract Demand under this Service Classification. If a Customer served under this Service Classification is also served under the EDDS Rate Schedule, an EDDS ratio will be calculated. The EDDS ratio will be the Customer's kW allocation under the EDDS Rate Schedule to the sum of the EDDS kW allocation and the Contract Demand under this Service Classification. The portion of the Customer's As-used Daily On-Peak Demand served under Rider Q shall be the product of the PFJ ratio and the As-used Daily Demand. The portion of the Customer's As-used Daily On-Peak Demand served under the EDDS Rate Schedule shall be the product of the EDDS ratio and the As-used Daily Demand. The balance of the As-used Daily On-Peak Demand will be served under this Service Classification.
